JOMAR TOOLING AND TURN KEY SYSTEMS

The tooling is the HEART of the process with any plastic molding machine.

There is an old saying “ A poor tool will make a great molding machine look bad”. This means that no matter how good the machine is, it can't compensate for the problems of a poorly designed or manufactured tool.

All tools contracted by Jomar are fully guaranteed to meet your specifications. Our molds are fully tested by our in house process technicians and tooling manager.

Jomar Model 85S
LDPE Dropper Bottle, 16 cavities

Jomar offers tooling for all of our existing machines as well as turnkey systems. Our turnkey systems consist of matching your new Jomar to the tool that you have chosen. We design and test the machine and tool together.

Jomar Model 135
120 ml, 16 cavities

You are trained, here at Jomar, during this process.

When the customer gives final approval, the machine and tooling are commissioned in the customer's plant by our tooling department staff. Further training is conducted and the package is put into production.

With this service available from Jomar Corp, the world leader in Injection Blow Machinery, why would you ever consider doing all of this on your own.

It is true that you will always find cheaper tooling throughout Asia but the quality will also be much less. The cycle times may be 10-15% longer. Repairs may be required more frequently due to the metals they selected.

Jomar Model 20
LDPE Dropper Bottle, 6 cavities

Now that is just the mold itself. What about the time and resin that goes into developing the process for the tool.

In our business, time is money and resin at an all time high can erode your profits.

I have attached several recent tools that we have completed and delivered. I am sure you will find this interesting.

I urge you to contact me with any tooling questions that you may have.
