

# Jomar Model 15

This month's featured machine is the Jomar Model 15.

The Model 15 is the smallest machine in our product line but by no means is it to be considered as anything but a high production machine.

The Model 15 is designed to run conventional resins such as HDPE, LDPE, PP etc.

Eye droppers, mascaras, pharmaceuticals and almost any container up to 100ml is ideal for this machine. Of course, you understand that the larger the container the fewer number of cavities can be run.

Eye droppers from 5-30ml can fit 5-6 cavities running on a 10 second cycle.

At 6000 hours per year, this machine can produce up to 13 million containers.

It is very compact in size and is extremely energy efficient.
